0: Carrier + readout
Identify a physical measurement map
No map: not yet a quantity
1: Convention and epoch
Check identities and time/frame dependence
Defining identity: convention
Time-specific reading: epoch
2: History and permitted inputs
Check what sets the value
Value-setting history: output of history
3–4: Optional grammar; numerical null
A near match needs a matched search null
5: Admissible completions
Test constancy or independent selection
Varies: model choice
Established selection: governed
Constant / new independent selection: conditional candidate
6–7: Freeze, independence, reopening
Register tests, dependencies and reopening
